

Amendments to the Claims

This listing of claims will replace all prior versions and listings of claims in the application:

1 - 4. (Canceled)

5. (Previously Presented) A method for inserting a new device in a community of devices comprising:

selecting, by a user, a user chosen device from one of the community of devices for authorizing insertion of a new device into the community;

storing, by each device of the community which receives an insertion request from a new device, the insertion request in a memory of said each device;

forwarding, by each device of the community which receives a request from the user chosen device, the at least one stored insertion request to said user chosen device; and

performing, by the user chosen device, at least one user action for authorizing the insertion of the new device into the community.

6. (Previously Presented) The method according to claim 5, further comprising:

selecting, using the user interface of the user chosen device, one of the insertion requests received by the user chosen device, to authorize the device having emitted said insertion request to be inserted in the community.

7. (Previously Presented) The method according to claim 6, further comprising:

sending, from said user chosen device, an insertion request to the new device inserted in the community to request that said user chosen device enters the new device's community.

8. (Previously Presented) The method according to claim 7, wherein said insertion request from said user chosen device is transmitted to the new device inserted in the community through the device of the community having first forwarded the insertion request from the new device to the user chosen device in case said user chosen device cannot directly communicate with the new device.

9. (Previously Presented) A device adapted to belong to a community of networked devices, wherein said device comprises:

- a first memory for storing at least one insertion request received from a new device requesting to be inserted in the community;

- a network interface for sending the at least one insertion request stored in said first memory upon request from a device chosen by a user of the community for performing at least one user action for authorizing the insertion of the new device in the community;

- a second memory for storing insertion requests sent by other devices of the community when said device is the user chosen device.

10. (Previously Presented) The device according to claim 9, further comprising:

- a user interface allowing a user to select one of the insertion requests received by the user chosen device, to authorize the device having emitted said insertion request to be inserted in the community when said device is the user chosen device.

11. (Previously Presented) The method of claim 5, wherein insertion requests contain a provable identity of the new device.

12. (Previously Presented) The method of claim 11, wherein the device having received an insertion request from a new device is further able to broadcast the provable identity of the chosen device to the new device.
